

Hassan Siddiqui

AI Engineer · LLM / GenAI Developer · AI Backend

Bhopal, India (Open to Remote / Relocation) | hassaansiddiqui65@gmail.com | +91 9407589120 | github.com/hassansid65 | linkedin.com/in/hassan-siddiqui-193507279

SUMMARY

AI Engineer building production-grade LLM and GenAI systems — RAG pipelines, agentic workflows, and voice AI — served through scalable FastAPI microservices. Hands-on with OpenAI (GPT), Anthropic (Claude), LangChain, LangGraph, and vector databases (Milvus, FAISS), shipping low-latency, multi-tenant AI backends to live production. Focused on retrieval quality, system reliability, and measurable business impact.

TECHNICAL SKILLS

- Languages & Frameworks:** Python, FastAPI, Flask, REST APIs, SQL
- GenAI & LLMs:** OpenAI / GPT, Anthropic / Claude, RAG, LangChain, LangGraph, MCP, Prompt Engineering, Agentic Workflows, Hugging Face
- Vector & Retrieval:** Milvus, FAISS, BAAI BGE Embeddings, Semantic Chunking, OCR Ingestion
- Voice AI:** Azure TTS/STT, Real-time Speech Pipelines, Low-latency Streaming
- ML & Data:** PyTorch, TensorFlow, Transformers, Scikit-learn, Pandas, NumPy, Power BI
- Cloud, DevOps & Data Stores:** Azure AI Foundry, Docker, Git/GitHub, CI/CD, PostgreSQL, MySQL, Redis

EXPERIENCE

AI Engineer — AskGalore Oct 2025 – Present | Bhopal, India

Plainflow.ai — AI Finance Automation *(client engagement)*

- Build pipelines that ingest, reconcile, and transform financial data into automated accounting and reporting workflows, cutting manual processing time significantly.
- Work directly with international clients to gather requirements, map their finance processes, and deliver tailored automation that replaces repetitive manual data entry and reconciliation.

AI Products & Voice Platforms

- Designed and shipped production RAG systems exposed via scalable FastAPI REST APIs, serving real-time conversational queries for multiple live client environments.
- Built end-to-end document ingestion pipelines (OCR fallback, semantic chunking, Milvus vector storage) that improved retrieval relevance by **50–60%** over baseline keyword search.
- Developed real-time TTS/STT voice pipelines powering low-latency, multi-session conversational AI in production.
- Architected an independent client data-collection service (MCP server, OCR, LLMs, LangGraph) that automated **80–90%** of manual data entry.
- Engineered a multi-tenant backend serving concurrent live clients with high availability and seamless CRM integration.

KEY PROJECTS

MachineAvatars — Conversational Sales Avatars *(Live in Production)*

RAG + FastAPI orchestration for real-time AI avatars that qualify leads and automate sales 24/7; built a standalone MCP + OCR + LLM data-extraction service, deployed on multi-tenant backend with CRM integration.

Speakwell — AI English Learning Platform *(Live)*

TTS/STT conversational AI for scenario-based speaking practice with a free-talk evaluation engine analyzing grammar and performance insights.

Snow Melting Marketing Tool *(Live)*

AI image-analysis workflow simulating realistic snow placement on property images using LangGraph orchestration and confidence-based routing.

Remote Physios — 3D Avatar RAG Chatbot *(Live)*

Voice-driven 3D avatar physiotherapy assistant delivering personalized therapy guidance via RAG and backend APIs.

WHITE PAPER

Realistic Human Speech Generation: Humanized Voice & Voice Cloning — AskGalore. Technical white paper on AI-driven speech synthesis and voice cloning, covering architecture, real-time latency, and production deployment.

EDUCATION

B.Tech — Artificial Intelligence & Data Science 2021 – 2025
Sagar Institute of Research & Technology Excellence, Bhopal
